TIPS ON USING THE WILLIS L. JEPSON ON-LINE NATIVE PLANT STORE

Please be aware that there are several California Native Plant Society Chapters with plants sales underway at the same time. The On-Line Plant Store will bring you to the “Willis L. Jepson” inventory.

You can organize the plant pictures alphabetically using the drop-down menu in the top right corner of the picture grid.

Click on the photo that interests you, and it will bring you to a new window where you can select the quantity and, in some cases, size options. The window also provides a description of the plant or a URL to the Calscape website that provides more photos plus information on the plant’s characteristics, landscaping information and natural setting.

Each plant we sell will be growing in a Small-Jepson and/or Large-Jepson container. See below for pictures of these container sizes.

If the plant you selected is available in both small and large containers, a Select an option dropdown menu will appear above the Add to Cart button. Here you select either a Small – Jepson container or a Large – Jepson container.

If the plant you selected is being sold by the Jepson Chapter and other chapters, a Select an option dropdown menu will appear above the Add to Cart button. The menu shows the plant sizes that are available by all the Chapters selling that plant. MAKE SURE YOU SELECT EITHER Small - Jepson OR Large - Jepson. Otherwise you will have selected a plant being sold by another chapter.

When you checkout, the On-Line Store will default to the Benicia pickup location. If you want to use the Fairfield pickup location, send an email to contact@jepson.cnps.org, and you will receive instructions for the Fairfield pickup.
