NATIVE DEMONSTRATION
MEADOW SITE VISIT

Three Oaks Community Center, 1100 Alamo Drive, Vacaville CA
March 4, 2018
Demonstration Meadow
Welcome to Vacaville’s Demonstration Meadow

The grass and sedge species featured here are native to California and thrive in our dry climate. Once established, they only need to be irrigated two or three times a month. Replacing a traditional turf lawn with one (or more) of these California natives will greatly reduce landscape water use and will help create a drought-tolerant, wildlife-friendly yard.

Featured species:
- Red fescue (*Festuca rubra*)
- Idaho fescue (*Festuca idahoensis*)
- Slender sedge (*Carex praegracilis*)
- June grass (*Koeleria macrantha*)
- Purple needle grass (*Stipa pulchra*)

For more information on native grass and sedge meadow species and how to plant them, visit our website at: [www.solanorcd.org/resources/demonstration-sites](http://www.solanorcd.org/resources/demonstration-sites)
